ASTM B557M : Standard Test Methods for Tension Testing Wrought and Cast Aluminum- and Magnesium-Alloy Products (Metric)

ASTM B557M : Standard Test Methods for Tension Testing ...

These test methods address the tensile and shear strengths of post-installed and cast-in-place anchors in test members made of cracked or uncracked concrete. Loadings include quasi-static, seismic, fatigue, and shock. Environmental exposures include freezing and thawing, moisture, decreased and elevated temperatures, and corrosion. These test methods provide basic testing procedures for use ...

ASTM B557-94 - Standard Test Methods of Tension Testing Wrought and Cast Aluminum- and Magnesium-Alloy Products January 1, 1994 - ASTM International 1.1 These test methods cover the tension testing of wrought and cast aluminum- and magnesium-alloy products, excepting aluminum foil.

ASTM International - ASTM A370-08a - Standard Test Methods ...

These test methods cover procedures and definitions for the mechanical testing of steels, stainless steels, and related alloys. The various mechanical tests herein described are used to determine properties required in the product specifications. Variations in testing methods are to be avoided, and standard methods of testing are to be followed to obtain reproducible and comparable results.
